

Global Climate Initiative 2026

The Global Climate Initiative aims to reduce carbon emissions by 40% over the next decade.

Key strategies include:

- Transitioning 50% of public transport to electric vehicles by 2030.
- Subsidizing solar panel installations for residential properties.
- Implementing a carbon tax on industrial emissions exceeding 10,000 tons annually.

These measures are expected to create 500,000 green jobs and significantly improve urban air quality.
